COURSE DESCRIPTION

Economics 2180 is a one-semester international economics course that covers the basic concepts of international trade and international finance. Students are presumed to have successfully completed Principles of Microeconomics and Macroeconomics.

The first half of the course focuses on international trade topics. These include the effects of trade on an economy, the economic consequences of protectionism and the institutional and legal structures of international trade in goods and services. The second half of the course focuses on international financial issues. These include the determination of exchange rates, international capital flows, balance of payments accounts and fixed versus flexible exchange rate regimes.

Please note that this course is primarily designed for Elliott School undergraduate students seeking to satisfy their international economics requirement, though other students are certainly welcome. Economics majors should note that only two of the following courses can be counted towards the 100-level economics course requirements (Econ 2180, 2181, and 2182)
